

## Press Release

PlanET Biogastechnik projects available on video now

### **PlanET Biogastechnik presents new videos on Youtube**

*In order to provide information to journalists, customers and farmers, PlanET Biogastechnik published videos on Youtube now. PlanET Biogastechnik has recently uploaded videos in English and French with the aim to inform people interested in sustainable development.*

**Vreden/Essen 19<sup>th</sup> July 2012:** Stephan Hoffmann, PlanET project manager for UK declares the recent marketing measure: “Youtube is more and more considerable for companies specialised in biogas. Farmers want to get a visual impression of how biogas plants are working and how biogas can be used”. That justifies PlanETs decision to establish an online information broadcast. The videos show the various ways of using biogas to produce power and heat or to upgrade biogas to natural gas quality. As Stephan Hoffmann emphasises: “A video allows a better understanding than texts and pictures”. Visit us at:

### **Background: PlanET Biogastechnik GmbH**

280 realised biogas plants and more than 230 employees at national and international PlanET offices: The PlanET Biogastechnik GmbH ranks amongst the top 5 provider for planning, building and maintaining biogas plants in the world. By using the modular design principle “SYSTEMBIOGAS”, PlanET ensures that operators and investors have the possibility to improve the efficiency of existing plants as well as the adaption to new developments and circumstances within the biogas market. PlanET biogas plants are characterised by high gas yields, long-lasting technology, reliability, low energy consumption and an outstanding efficiency.
